**SISTEMY ZASCHITY+**

Development and production of mechanical security systems

**Russia**

Orsk

## Dear Business Partners!

Sistemy Zashchity+, LLC has been developing and manufacturing mechanical security systems since 2006:

- Mechanical lock "Expeditor" for protection of 20- and 40-foot containers and trucks from theft of cargoes.
- Mechanical anti-theft devices for protecting motor cars against theft: "Perekhvat-Universal", and "Piton".
- We develop mechanical security systems according to the customer's specifications.

The products have unique characteristics:

- There is no traditional keyhole in the locks (excludes all known methods of criminal opening);
- Locks do not require care ("not afraid" of dirt, sand, etc.);
- "Expeditor" is a universal lock – suitable for use on 20-40-foot containers and trucks;
- Container lock "Expeditor" does not require installation.

We are interested in finding partners to promote our products in the Middle East and Europe, as well as customers for wholesale deliveries of container lock "Expeditor" or anti-theft devices "Perekhvat-Universal" and "Piton" to:

- Logistics companies (Cargo carriers)
- Container carrier
- Insurance companies specializing in cargo insurance
- Agencies specializing in the search for stolen goods
- Container manufacturers
- Wholesale companies that sell security systems to protect cars from theft, namely: mechanical locks of the steering shaft and transmission, armored ignition locks, electronic alarms, immobilizers, etc.

Best regards,  
Alexander Sharipov  
General Director,  
Sistemy Zashchity +, LLC
