Company

Metalloobrabatyvayushchaya
Kompaniya, LLC was founded in 2013
by professionals who from the very
beginning set the goal of creating a
modern industrial enterprise.

History

Aim

Tasks

Our
achievements

MK, LLC is a unique production and the only manufacturer of locking and regulating valves in the territory of Tyumen Oblast, which uses only high-quality castings and rolled metal products of the best Russian manufacturers.

The company has mastered the production of wedge gate valves with a diameter of 15 to 200 mm and a pressure of 1.0 to 25.0 MPa. On the basis of the enterprise, a laboratory was created to test the strength and tightness of the stop valves by the method of hydraulic testing. In production modern milling, turning, drilling machines and other equipment with program control are used, which ensures precise processing of blanks. In May 2016 2 CNC milling machines from MAHO (DMG) were purchased.

Purpose of the Company

Production of high-quality shut-off valves for all industries, as well as designing and manufacturing reliable pipeline fittings.

**MK, LLC does not stand still
and every year sets itself
strategic tasks, choosing new
and promising directions.**

1

One of the priority tasks for the Company's team over the past few years is the modernization of production equipment, with the aim of maximizing efficiency, reducing production costs and optimizing productivity.

All these transformations, as a rule, are impossible without expansion of production areas.

Technical re-equipment is carried out with minimal costs and in strict accordance with the approved development plan of the enterprise.

Along with innovative activity, MK, LLC produces in the shortest possible time products of high technological quality of execution, using not only advanced equipment, but also the most modern methods of metal working.

Various types of metals are used in the work: from simple steels to non-ferrous metals.

Our principles

Production

The main line of business is the production of shut-off and control valves, pipeline parts, hardware-anchor products, flanges, radial brakes, as well as:

- External anticorrosion coating of pipeline shut-off and control valves;
- External and internal anticorrosion coating of pipeline connecting parts;
- Repair and hydraulic testing of stop valves;
- Production of all kinds of metal structures, according to generally accepted standards, as well as non-standard metal structures according to the customer's drawings.
- Metalworking: turning, milling, grinding, drilling;
- High-precision plasma cutting on a CNC machine;
- Work on chemical-thermal processing: hardening, tempering, improving mechanical properties;
- Manufacturing and repair of hydraulic cylinders for automotive, construction and special machinery.
- Manufacturing of products according to the individual projects of the Customer from any material;
- Design and development of technical documentation of analogues of imported parts.

Products

Services

Products of the Company:

- hardware;
- shut-off and control valves;
- Ball Valves;
- quick-release couplings;
- obturators;
- latching control column;
- pipeline supports.

Using high-tech equipment, the Company offers the following services:

- **Milling work on CNC machines;**
- **Plasma, laser cutting of metal;**
- **Welding works;**
- **Locksmith work;**
- **Heat treatment of parts (hardening);**
- **Grinding of metal;**
- **Designing and modernization of equipment.**

Our principles

1. Quality - the company guarantees high quality of products and services;

2. Reliability - the order will be executed exactly on time and in strict accordance with the wishes of the customer;

3. Respect - The company values the time and money of the customer. Individual approach to each client and flexible pricing policy.

Company

Our principles

Qualitative metal working is one of the main priorities of the complex process in the Company and guarantees a high level of execution of all pipeline fittings. The high technological level and modern production facilities allowed the company to establish production of pipeline fittings that meet Russian and international standards. In the production process, metal cutting equipment of leading European and Russian companies is used.

All products are certified according to the ISO 9001 system and comply with the latest actual requirements of the customs union, which is confirmed by the certificates of compliance of the EAC, the certification system of GazpromSert. The introduction of a quality management system in accordance with the ISO 9001 system brought the products to a high level and placed them on a par with the largest producers in Russia.

Advantages

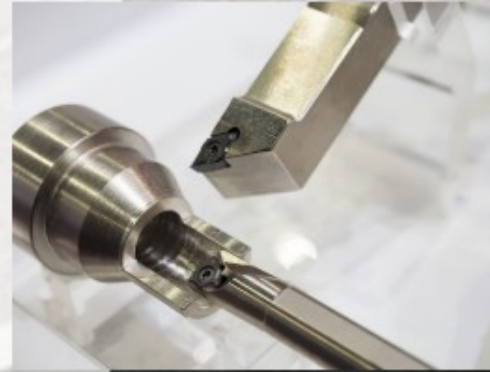

Advantages

All shut-off valves are in compliance with current safety standards, as well as current international standards.

The products are made for use in various climatic conditions and environments, which is confirmed by multiple tests in the Certification Centers.

A factory warranty of 24 to 36 months is provided.
