The Smart Intercom Service is intended for

Property Developers

*A great marketing move
when selling apartments*

Property Management Companies, Homeowners' Associations

*Customer service improvement and satisfaction
of the company customers*

Clients

*Your clients can open the door
to their guests, wherever they are.*

What are the advantages of the implementation?

Increase in penetration percentage

Introducing "Smart Intercom", you get an additional tool for selling your basic services. You get a database of new contacts of residents who are loyal to your company.

First in the house!

Cooperating with property developers your company is the first to offer its services to the residents.

New points of contact with Property Management Company

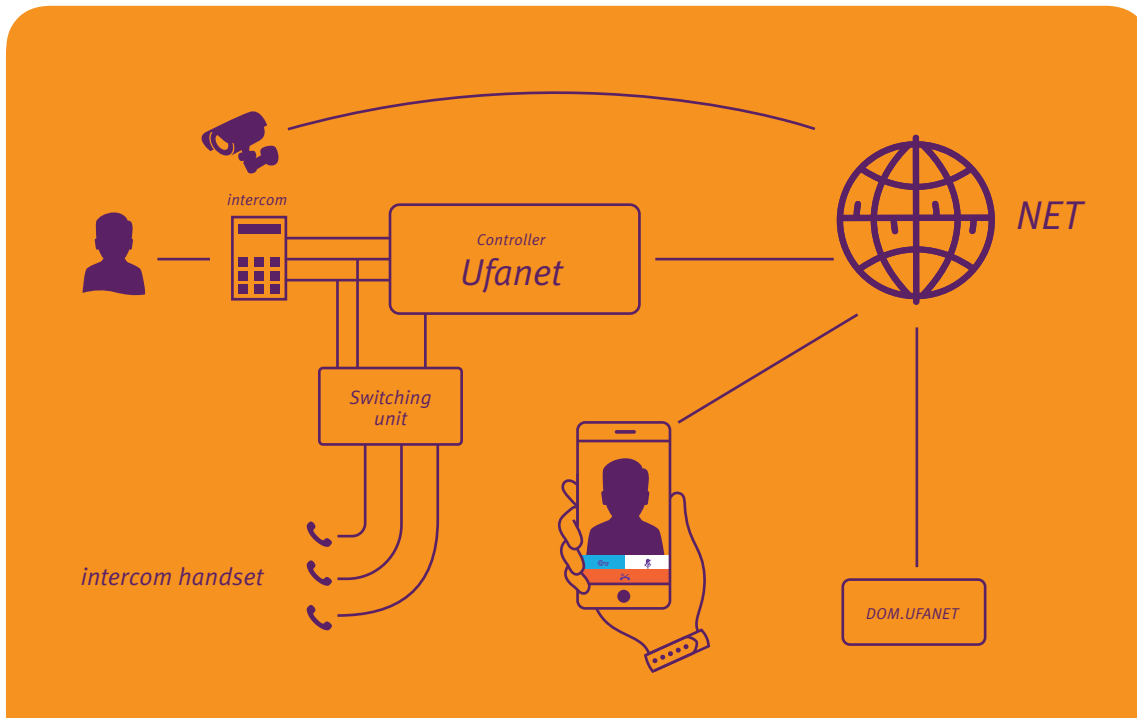

You improve the basic intercom service without changing it. Therefore, property management companies are ready to cooperate.

New source of income

You can upgrade the existing intercoms and open a new direction in your business, that is "intercom maintenance". Depending on your agreements with the HOA / property management company your company will be able to receive monthly income from every client.

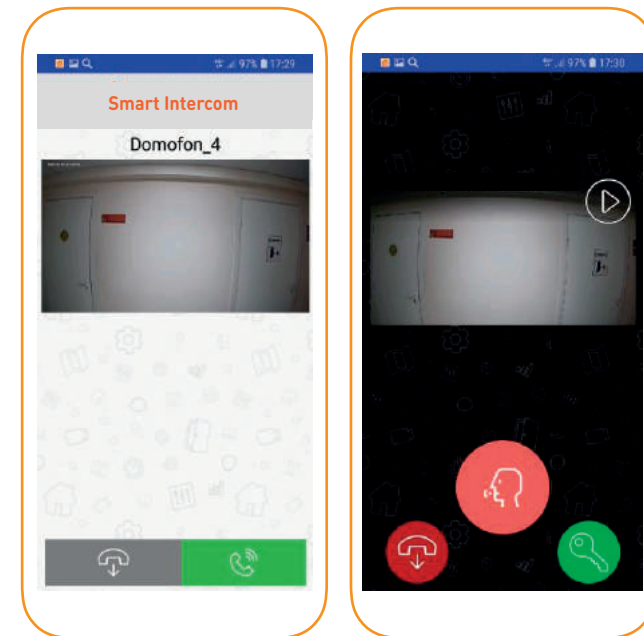

How is it technically implemented?

We upgrade the existing intercom equipment and install a camera at the entrance and necessary equipment for the Smart Intercom Service.

How does it work?

When the apartment number button is pressed, the smartphone receives a video call, the resident sees a visitor and can speak with him and open the door.
